# Assignment 3

## Sahishnu (cs21btech11009)

Abstract—This document contains the solution for Assignment 3 (CBSE Class 11 Ex 16.3 Q.15)

#### Q.15 [CBSE 11 Ex 16.3]:

If E and F are events such that  $P(E) = \frac{1}{4}$ ,  $P(F) = \frac{1}{2}$  and  $P(E \cap F) = \frac{1}{8}$ , find

- (i) P(E or F)
- (ii) P(not E and not F)

#### **Solution:**

#### (i) $P(E \cup F)$

From Set theory, If there are two events A and B, we know that,

$$P(A \cup B) = P(A) + P(B) - P(A \cap B) \tag{1}$$

$$\rightarrow P(E \cup F) = P(E) + P(F) - P(E \cap F) \quad (2)$$

$$\Rightarrow P(E \cup F) = \frac{1}{4} + \frac{1}{2} - \frac{1}{8} = \frac{5}{8}$$
 (3)

$$P(E \cup F) = \frac{5}{8} \tag{4}$$

### (ii) $P(E' \cap F')$

From set theory, If there are two events A and B, we know that,

$$P(A' \cap B') = (P(A \cup B))' \tag{5}$$

$$\to P(E' \cap F') = (P(E \cup F))' \tag{6}$$

$$\Rightarrow P(E' \cap F') = 1 - P(E \cup F) \tag{7}$$

$$\Rightarrow P(E' \cap F') = 1 - \frac{5}{8} = \frac{3}{8}$$
 (8)

$$P(E' \cap F') = \frac{3}{8} \tag{9}$$
